Education

California Institute of Technology — Pasadena, CA, USA
Ph.D. in ***Applied and Computational Mathematics*** — 2022 – 2027
- ❑ Advisor: Prof. Andrew M. Stuart
- ❑ GPA: 4.1

Indian Institute of Technology Madras — Chennai, India
M.Tech. in ***Data Science*** — 2020 – 2021
B.Tech. in ***Mechanical Engineering*** — 2016 – 2020
- ❑ Minor in **Applied Mathematics**
- ❑ GPA: 9.28/10

Research Backgroud

My research interests lie at the intersection of artificial intelligence, applied mathematics, and physical sciences. I develop data-driven and physics-informed machine-learning methods for discovering models of complex physical systems from computational and experimental data. My Ph.D. research focuses on learning governing laws, constitutive relations, and latent variables while incorporating physical structure and mathematical constraints.

Employment History

Wells Fargo — Bangalore, India
Data Scientist — 2021 – 2022
- ❑ Developed an **automated OCR and regular-expression pipeline** to detect, extract, and structure data from unstructured PDF documents.
- ❑ Deployed the pipeline on the firm's **parallel computing** cluster, automating the end-to-end workflow from PDF ingestion and data extraction to structured-data generation.

Internships

Tata Research Design and Development Center — Pune, India
Research Intern in Machine Learning — Winter, 2020
- ❑ Developed a **machine-learning-driven framework for multi-objective optimization** of product designs, integrating CFD simulations with surrogate modeling.
- ❑ Built a **machine learning surrogate** model to rapidly predict separation factor and pressure drop, enabling efficient exploration of the particle-classifier design space.
- ❑ Performed **multi-objective optimization** to identify Pareto-optimal designs balancing separation performance against pressure drop.

RWTH Aachen University Aachen, Germany
Research Intern in Computational Solid Mechanics Summer, 2019

- ❑ Modeled the 3D brick-and-mortar microstructure of nacre using HyperMesh, representing the composite architecture of brittle calcium carbonate and ductile organic matrix.
- ❑ Conducted LS-DYNA simulations to characterize the mechanical properties and investigate the effect of material composition on the toughness of nacre-based composites.
- ❑ Demonstrated that increasing the organic-matrix fraction enhances composite toughness but results in a corresponding reduction in overall strength.

Ph.D. Research Background

- ❑ **Modeled non-Markovian dynamics** of viscoplastic materials by engineering a **custom recurrent neural network (RNN)** trained on sample load and response trajectories.
- ❑ **Enforced dynamic stability** by constraining the architecture to be convex.
- ❑ Implemented custom training pipelines **utilizing backpropagation, adjoint methods,** and **stochastic differential equations** to generate synthetic training trajectories.

Awards & Achievements

- ❑ The Bell Family Fellowship 2022
- ❑ Mitacs Globalink Scholarship 2020
- ❑ UGC-DAAD Research Scholarship 2019
- ❑ Top 0.15% in JEE-Advanced 2016

Relevant Coursework

Probability, Statistics & Stochastic Processes; Stochastic Differential Equations; Linear Algebra; Optimization; Deep Learning

Tools

PyTorch, Numpy, Pandas, Scipy, Scikit Learn
